DENTAL IMPLANTS INSTRUMENTS

Osteotomes Elevators

Depth markings on Osteotome tips Allows clinician to know how deep the instrument is in the socket Available with stops Helps ensure instrument does not penetrate too deep into the socket Extensive product offering Provide clinicians with the proper instrumentation per procedure.

Osteotomes developed for the lateral bone condensation of the closed sinus elevation techniques. The set is consisting of straight / angulated and bayonet. all with either pointed, convex or concave tips. The bayonet angulated version is meant for the use in the lateral upper jaw region or in maxillary areas that are difficult to reach.

Manual Bone Mill, Holding & Drilling Forceps

Ideal for Chairside Preparation of Autogenous Bone Grafts
Bone Morselizer Bone Morselizer
ANE-06-272 Bone morselizer

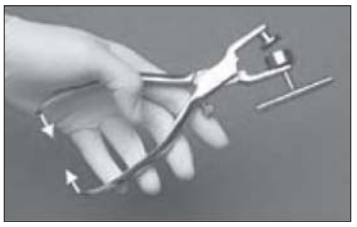

BONE MORSELIZER
The Bone Morselizer is a hand instrument which helps in the crushing of bone material. Follow these steps to prepare properly crushed bone:

1. Adjust the spacing screw (located at the hinge of the handles) to the desired spacing requirements between knurled surfaces.

2. Place the bone material into the bone well.

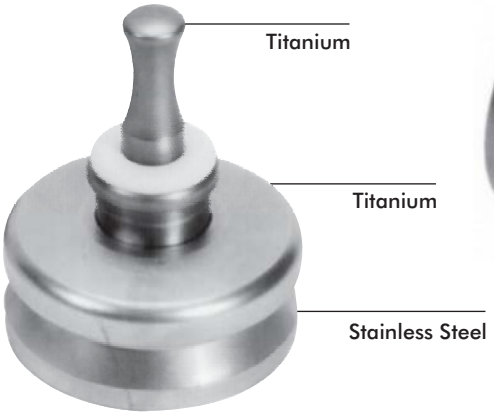

3. Compress handles together in order to create pressure on the bone material.

4. Turn the bone morselizer clockwise as the handles are squeezed. Always maintain a slight space between the two knurled surfaces, by using the spacing screw.

5. To remove bone, press the T-handle and bone will express from the bone well.
